

About us

The manufacturer of Kasten products - Constructor Finland Oy – has been in the steel manufacturing business since 1886. We develop, manufacture and market products and services for storage requirements, for warehouse solutions as well as for archives and office storages, material handling, shops and retail solutions. The company is part of the Constructor Group.

Kasten is the market leader in Finland and has the longest production history in their business area. We have reached our position as market leader of the businesses thanks to a conscious strategy to design our own products, manufactured by our own factories. This fact gives us a full control of the complete chain from idea to an up-running installation in full action at our customers.

Our know-how is the result of 125 years of experience and modern vision of how to handle steel. We specialise in all kinds of storage technology – from the most rudimentary steel shelving unit to the most advanced, as well as fully automated and sophisticated turn-key projects. Our ultimate aim is to provide solutions to all your storage and archiving problems in a flexible, innovative and cost-effective manner.

Our manufacturing plant is situated in Lohja, close to the Helsinki Metropolitan area. The Constructor Group's other manufacturing facilities are located in Russia, Germany, Romania and the Netherlands.

The Constructor Group is since 2007 owned by the investment company Altor Fund II and has a turn over of 330 million Euros and 1200 employees. Constructor Group is well represented in all Europe with own factories and sales companies acting under the brand names Dexion, Constructor, Bruynzeel, Kasten and PSS.
